a. Predictor selection frequency (%), real data vs best-of-M synthetic datasets

	REAL	CHIMERA	SYNTHPOP	CTGAN	GAUSSIAN COPULA	TVAE	TABDIFF
Age	100	100	90	100	100	72	100
Body mass index	18	78	76	97	69	33	90
Cardiac arrhythmia	98	100	82	96	100	100	96
Chronic respiratory failure	46	74	44	8	53	100	91
Cirrhosis	79	57	14	33	26	100	74
Coronary artery disease	61	33	83	81	14	54	62
Diabetes	32	58	51	92	6	13	6
Heart failure	100	100	100	100	82	91	100
Malignancy	100	91	77	100	100	23	100
Myocardial infarction	13	15	32	99	23	26	28
Peripheral artery disease	74	89	35	100	96	38	26
Serum albumin level	100	100	100	100	100	100	100
Severe behavioral disorders	28	70	45	94	27	32	75
Sex	40	50	84	5	8	55	48
Stroke	8	20	41	41	79	13	14
Walking	100	100	100	100	86	100	100

Not retained (selected in ≤ 70%) — Retained (> 70%)

0 25 50 70 100

Percentage of the 5,000 replications in which the predictor was selected

b. Concordance with the real-data model
